SECTION 18: EMAILS WITH PYTHON - 28 minutes, 3 parts
1/3 Introduction to Emails with Python
- **emails with Python**
  - -> emails with Python
  - -> checking the inbox for received messages
  - -> this depends on the admin privileges on the machine
    - ‣ -> don't use a work email etc
    - ‣ -> he suggests to contact the IT department if this is the case

- **outline**
  - -> this is effectively hacking into your own email
  - -> automatically sending emails in Python and checking your inbox
  - -> we can't create a true self assessment for this in Python
  - -> you can become creative about sending and receiving emails programatically in Python

Emails with Python

Complete Python Bootcamp

- In this section we will explore how to send emails with Python and how to check our inbox for received messages.
- Please keep in mind this process is highly reliant on admin privileges on both your local computer, your internet, and your email.

Complete Python Bootcamp

- It is highly likely that on a corporate network, work computer, or work email these methods will be blocked for security reasons.
- If you encounter issues due to this, please contact your IT department, as it is not an issue we can fix on our end.

Complete Python Bootcamp

- Lastly, there is no full exercise for these lecture topics, since there is no real way we can create true self-assessments for a personal email address.
- However, we do provide a notebook with some ideas for you to explore, we encourage you to get creative!
